EDUCATION

Grinnell College - B.S. in Computer Science Expected May 2027

Relevant Coursework: Data Structures & Algorithms (Java), Operating Systems & Parallel Algorithms (C), Discrete Structures, Calculus I–III (Multivariable), Statistics, Software Architecture, Advanced Operating Systems

Supplementary: Harvard Summer School (CS, 2022), Dual Enrollment at CWU (CS, Math, Economics, 2021–23)

TECHNICAL SKILLS

Languages: Java, Python, C, C#, luau, SQL

Tools/Frameworks: Git / GitHub, IntelliJ IDEA, VS Code, JavaFX, Excel, MATLAB, Streamlit, Unix, Curses, Linux, rojo

Libraries: pandas, scikit-learn, XGBoost

Core Concepts: OOP, Data Structures & Algorithms, Algorithm Design & Optimization (Big-O, Recursion), Database Design (SQL Schema), JSON Parsing & Serialization, Software Testing (JUnit), Version Control & Collaboration, Statistical Modeling, Machine Learning, Concurrent Task Execution, REST API

EXPERIENCE

Community Moderator / Production Assistant YouTube Channels (5M+ combined subscribers) May 2026 – Present

- Manually reviewed 200,000+ held comments across 20+ video launches, catching harmful content in real time.
- Entrusted with the creator's private identity; safeguarded it and assisted the team with tasks as needed.

PROJECTS

ParlayIQ — NBA Prediction Pipeline (Python, XGBoost, pandas, Streamlit, SQL) - Grinnell College Project March 2026

• Built a Python data pipeline that ingests NBA data from a public API (75k+ rows), stores it in CSV, and trains XGBoost models for game outcome and player stat prediction. • Engineered 18 features (rolling averages, rest days, pace) using time-series cross-validation to prevent data leakage.

- Deployed an interactive Streamlit dashboard to display daily predictions and model outputs.
- Automated daily data updates and predictions via CLI pipeline.

Volleyball Statistics Tracker (Java, JavaFX, SQL, Excel, JUnit) - Personal Project October 2024

- Built a desktop application to record live volleyball match data and generate team and player analytics across multiple performance metrics, and tested with sample matches and 100+ player-stat entries.
- Developed team-creation and stat-tracking modules with Excel export for data analysis using Apache POI.
- Implemented JUnit tests verifying statistical calculations and data-integrity logic.

Cosmic Evolution — Multiplayer Roblox Game (Luau, Rojo, Git) - Personal Project - ongoing October 2026

- Built and published a live multiplayer game with a server-authoritative architecture to prevent client exploits.
- Designed a modular, config-driven system separating balance data from logic for rebalancing without code changes.
- Implemented persistent player data with session locking to prevent data loss and duplication across sessions.

User-Level Task Scheduler & Terminal Game (C, Unix, ucontext, curses) December 2025

- Implemented a user-level multitasking scheduler in C using ucontext for manual context switching.
- Designed task states and scheduling logic supporting sleep, blocking I/O, and inter-task signaling.
- Built a terminal-based game using ncurses running on the scheduler to demonstrate concurrent task execution.

LEADERSHIP AND PROFESSIONAL CONFERENCE PRESENTATIONS

Teen Mentors Leader - Kittitas County Robotics 4-H 2020–2023

- Directed a mentor team supporting 24 youth in robotics and STEM design challenges, guiding team to regional win

Pacific Northwest Regional Economics Conference (PNREC) May 2022

- Presented two research projects (macroeconomic analysis; survey 35 colleges data) to Ph.D. economists/policymakers.

HONORS AND AWARDS

- Eagle Scout, Boy Scouts of America (2023)
- Harry Hopkins 1912 Grant, Founder's Scholarship (Grinnell College, 2023-2027)
